

Simulator in a Box

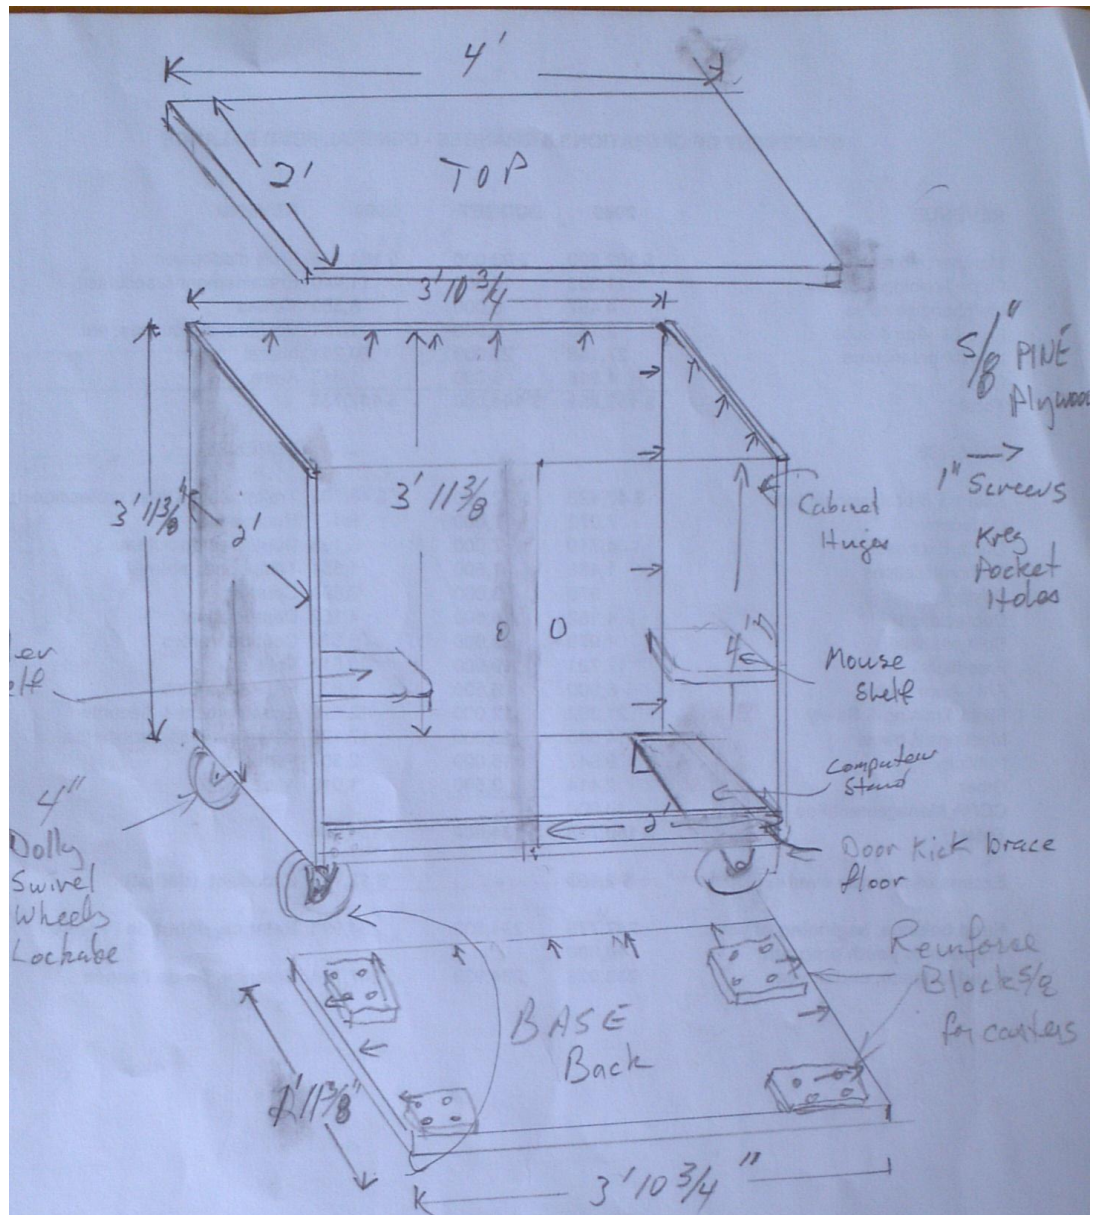

- Piano hinge for doors
- Slide out shelf hardware for monitor tray
- Vent hole at top center back panel with 122 cfm ThermoCool 110V fan
- I used flat black paint but semigloss will be easier to clean/dust
- Removeable black out hood can be built over top to block out view and increase sensation of movement
- monitor mounts were made of aluminum sheet material (cut holes for cabling, not done on prototype)

- Glue and srew cabinet together, I used PL premium construction adhesive.

5/8" PINE Plywood

1" Screws

Kreg Pocket Holes

4" Dolly Swivel Wheels Lockable

Cabinet Hinges

Mouse Shelf

Computer Stand

Door Kick brace Floor

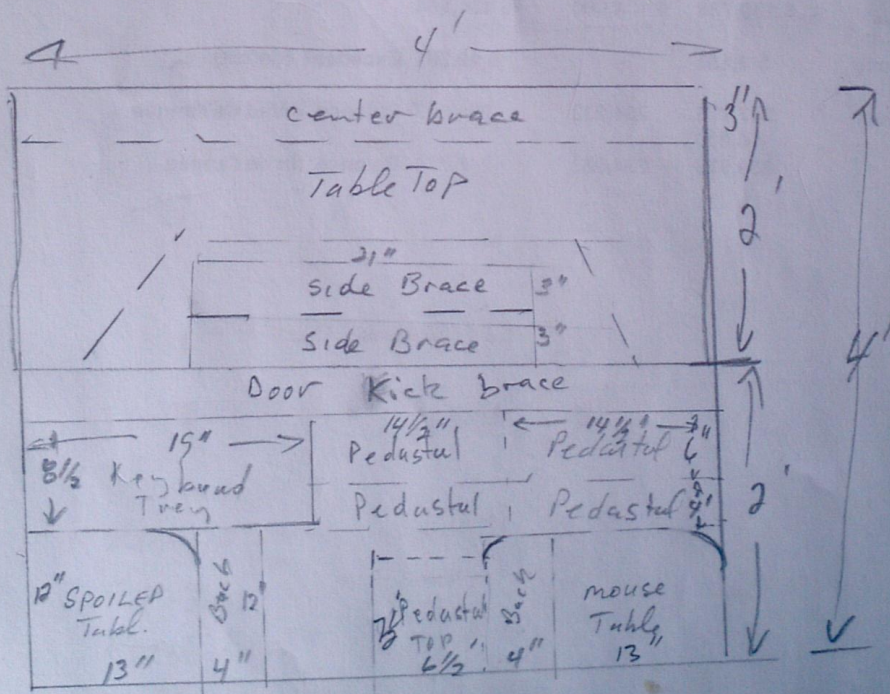

Reinforce Blocks for casters

Lock set

Vent & Fan 45° 3" x 10" vent
